DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 6 and 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hamilton '057.

Hamilton '057 discloses a modular spray gun assembly comprising all the featured elements of the instant invention, see figure 9.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 5 and 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamilton '057 in view of Huffman.

Hamilton '057 discloses all the featured elements of the instant invention except for the control module being valve needle with a single action piston or double action piston, a mounting plate and backup plate. Huffman discloses the teaching of using a single action piston

or double action piston or solenoid actuated valve to operate a control module. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use either a single action piston or double action piston for the solenoid actuated needle in Hamilton '057, since Huffman teaches the equivalence of using either single action piston or double action piston or solenoid actuated valve to operate a control module.

As to the use of a mounting plate or backup plate, the apparatus of Hamilton '057, as modified by Huffman, would be capable of using such plates in the device and would perform equally as well. Such plates are known in the art to facilitate assembly and disassembly of spray gun assemblies.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wary et al and Hamilton '908 show spray gun assemblies.
